RAINBOW TECH

PATENTED EVAPORATOR PROTECTION SYSTEM

The evaporator is the beating heart of an ice machine and that is why all Icematic M series machines come with Rainbow Technology®, a patented protection system designed to extend the life of this important element.

What is Rainbow tech®? It is the patented nano-technological treatment that protects evaporators from aggressive agents such as, for instance, those contained in some waters but also from wrong chemicals used for cleaning.

A very thin vitrification layer of the evaporator surface helps with a perfect release of ice cubes, furthermore, the limescale formation is reduced for total durability and food safety.

LEARN MORE

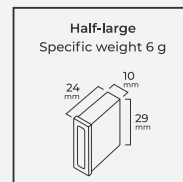

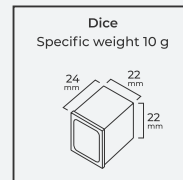

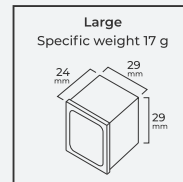

M SERIES DICE CUBE

The M Series modular ice makers offers a high productivity with an extreme easiness of use.

The M series ideal for establishments with high volume turnover and or those needing large volumes of ice in short time.

These icemakers are available with three different ice cube sizes LARGE, DICE & HALF-LARGE.

The M Series is the ideal solution for users demanding maximum productivity and great flexibility.
